
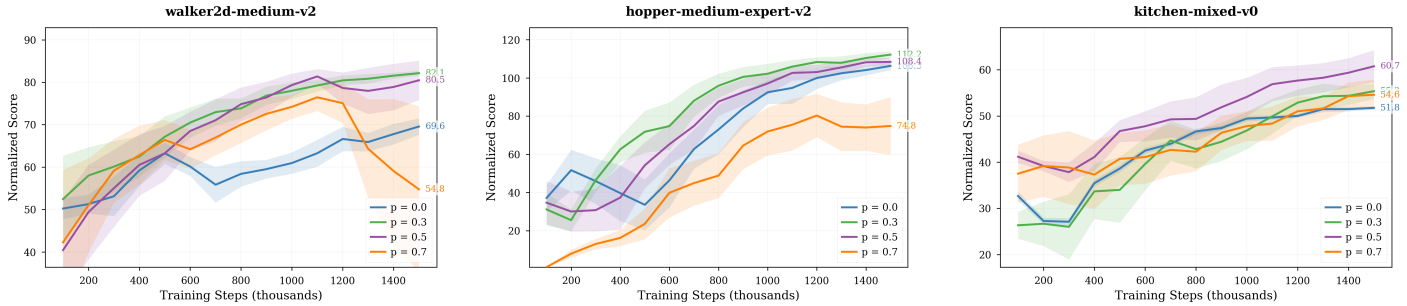

Figure 1: Sensitivity analysis of the stochasticity parameter p on representative D4RL tasks (`walker2d-medium`, `hopper-medium-expert`, and `kitchen-mixed-v0`), complementing the `halfcheetah-medium-replay-v2` results from our initial submission. We selected these specific environments to sample diverse qualities across both locomotion and manipulation domains. Moderate values ($p \in \{0.3, 0.5\}$) consistently yield the highest normalized scores, while performance degrades at $p = 0.7$ (extreme values, e.g., $p \geq 0.9$, diverge and are omitted for visual clarity). Solid lines show the mean across 3 random seeds with EMA smoothing (weight = 0.6); shaded regions denote ± 1 SEM.

Table 1: Hyperparameters for the base Gaussian ISEP across D4RL tasks. The table details the interpolation parameter (p), expectile (τ), and temperature (β).

Task	p	τ **(expectile)**	β **(temperature)**
halfcheetah-medium-v2	0.5	0.8	5.0
hopper-medium-v2	0.5	0.8	3.0
walker2d-medium-v2	0.3	0.8	5.0

kitchen-mixed-v0	0.3	0.8	0.1

Table 2: Hyperparameters for the ISEP-FM variant across D4RL tasks. The **guidance_weight** (w) denotes the classifier-free guidance weight applied during inference. Analogous to the temperature (β) in base ISEP, this guidance weight controls the degree of policy improvement.
